1. What are the main features of prediction from online inference? (Select all that apply) **1 / 1 point**

- [x] They are generated in real-time upon request.

  Correct
  Excellent!

- [x] They are based on a single data observation at runtime.

  Correct
  That's right!

- [x] They can be made at any time of the day on demand.

  Correct
  Correct!

- [ ] They are produced for all the data points at once.

2. In which area of online inference is a model artifact and model run created to reduce memory consumption and latency? **1 / 1 point**

- ( ) Infrastructure
- (•) Model Compilation
- ( ) Model Architecture

Correct
That's right! Model Compilation are running instances of the model responsible for performing the actual inference. Thus, multiple workers can run simultaneously on Torch Serve.

3. True or False: Fast data caching using NoSQL databases is a cheap way of optimizing inference. **1 / 1 point**

- (•) False
- ( ) True

Correct
Yes!
